Prompts for Your Company

Foundations of Artificial Intelligence • Dr. Andrew Schwarz

SLIDE 5 • Start with your company

Use this introduction once. Continue in the same chat and replace bracketed text with your example. Your company name is optional.

"I lead a company. Ask me, one question at a time, what we sell and to whom, why customers choose us and what supports that view, our main improvement priority, and what makes it difficult. Summarize my answers for correction. Use plain language and the facts I provide. Ask about missing information, label assumptions, and leave unknowns open."

SLIDE 35 • How could customer choices change?

"Ask what alternatives our customers consider and what they value. Describe two plausible ways AI could change their choices, the implications for us, and your assumptions. End with one question for my leadership team."

SLIDE 42 • Where could we improve customer experience?

"Ask about one recurring customer frustration and how we handle it. Suggest two improvements, including a simpler process change. Explain what customers would experience, what AI could contribute, and what people would do. Help me choose one to investigate."

SLIDE 54 • What would need to change internally?

"For [opportunity], ask how the work happens and which people, information, and systems are involved. Map potential changes to strategy, processes, data, skills, applications, and governance. Identify the first dependency to investigate and who could help."

SLIDE 67 • Where is our knowledge getting stuck?

"Ask about a question employees repeatedly ask or information they struggle to find, then ask where it lives. Explain how AI might help, what information needs attention, and who should maintain it. Suggest one small step I could authorize."

SLIDE 83 • How could this improve employees' work?

"Ask who our opportunity affects and which tasks frustrate them. Describe how work might change, one skill needed, and a concern to investigate. Give me three questions to ask employees before proceeding."

SLIDE 88 • Examine an AI opportunity

"For [business problem and desired outcome], ask about our workflow and constraints. Suggest up to three improvements using appropriate AI or conventional automation. Compare benefits, required data, workflow changes, human responsibilities, and review. Finish with three unanswered questions."

SLIDE 99 • Compare a vague and specific request

First try "How can AI improve our customer service?" Then try "For [workflow and problem], propose one small AI-assisted experiment to achieve [outcome]. Respect [constraints]. Specify data, human approval, failure points, and success measures. Label assumptions and avoid invented savings."

SLIDE 101 • Which direction fits our business?

"Compare automating work, improving employee decisions, personalizing service, building AI into offerings, and redesigning human–AI work. Identify two directions relevant to our priority. Ask one question to distinguish them, then suggest a starting point and what we must learn."

SLIDE 116 • What remains a leadership decision?

"Ask what could happen if AI makes a mistake in our opportunity. Distinguish what AI may prepare, what employees review, and what leaders approve. Suggest accountability and escalation arrangements. Identify assumptions behind the proposed boundaries."

SLIDE 120 • What could we test in 30 days?

"Ask what resources we can commit and how we judge current performance. Draft a small experiment with scope, employees, data, human review, and success measures. Identify reasons to continue, redesign, or stop, and the CEO decision needed."

SLIDE 121 • Challenge the proposed initiative

"Review [our opportunity and experiment] as a sponsor, operator, skeptic, and steward. Ask one difficult question about value, workflow, assumptions, and governance, respectively. Identify the evidence needed and suggest one revision. Our group will make the final decision."

Evaluate each response Identify one useful insight, one assumption, and one fact to verify.
